

What are they?

Points To Remember About Autoinflammatory Diseases

- Autoinflammatory diseases refer to problems with the immune system, which usually fights off viruses, bacteria, and infection. It results when your immune cells attack your body by mistake.
- Autoinflammatory diseases can cause fever, rash, swelling of joints and other tissues, and serious buildup of a blood protein in organs.
- In most cases, your doctor will prescribe medications to reduce pain and swelling or that act on the immune system.

Autoinflammatory diseases refer to problems with the immune system, which usually fights off viruses, bacteria, and infection. The problem causes your immune cells to attack your body by mistake. This can cause swelling that produces fever, rash, joint swelling, or serious buildup of a blood protein in your organs.

What are the types?

Some examples of autoinflammatory disease and their symptoms include:

- **Familial Mediterranean Fever (FMF)**, which can cause:
 - Fever that comes and goes.
 - Stomach pain.
 - Arthritis.
 - Chest pain.
 - Skin rashes.
- **Neonatal Onset Multisystem Inflammatory Disease (NOMID)** occurs in children during

the first six weeks in life. It can cause:

- Rash.
- Fever.
- Swelling in the lining of the brain.
- Joint damage.
- Vision loss.
- Hearing loss.
- Mental retardation.
- **Tumor Necrosis Factor Receptor-Associated Periodic Syndrome (TRAPS)** is associated with:
 - High fevers.
 - Pain in the stomach, chest, or joints.
 - Skin rash.
 - Swelling in or around the eyes.
- **Deficiency of the Interleukin-1 Receptor Antagonist (DIRA)** can cause the following serious conditions in children:
 - Swelling of bone tissue.
 - Bone pain and deformity.
 - Swelling of the tissues around the bones.
 - Skin rash that can cover most of the body.
- **Behçet's Disease** can cause the following symptoms:
 - Mouth or genital sores.
 - Redness and swelling in the eyes.
 - Arthritis.
 - Skin problems.
 - Swelling of the digestive system, brain, and spinal cord.

What causes them?

Autoinflammatory diseases are typically caused by changes in certain genes. This causes problems with proteins that are important in specific body functions. For some diseases, the cause is unknown.

How are they treated?

Treatments for autoinflammatory diseases can involve medications that:

- Reduce swelling and pain.
- Act on the immune system.
