SAMPLE EXHIBITS FOR RESOURCE-BASED CENTER APPLICATIONS

NATIONAL INSTITUTE OF ARTHRITIS & MUSCULOSKELETAL & SKIN DISEASES

INTRODUCTION

This document provides suggested formats for exhibits to be included in the NIAMS Resource-based Center (P30) Program applications for funding in FY2024. Applications for Resource-based Centers are sought through Requests for Applications (RFAs), and the topic areas for the focus of the Resource-based Center are listed in each RFA. These exhibits apply to the NIAMS Resource-based Center (P30) RFAs announced in 2023 for funding in FY2024. Research objectives, required components, application instructions, review criteria, reporting requirements and other information are included in the RFA:

NIAMS Skin Biology and Diseases Resource-based Centers (P30- Clinical Trial NOT Allowed). RFA-AR-24-001

NIAMS Resource-based Centers for Bone, Muscle, and Orthopaedic Research (P30- Clinical Trial NOT Allowed). RFA-AR-24-002
### EXHIBIT I – Grants Supporting the Research Community

Sample of Suggested Format

<table>

### EXAMPLE

**CORE:** Cell Culture

**Determination/Services Rendered**

A. Fibroblast Cell Cultures
B. Cell Isolations
C. Special Media Preparation
D. Isotopic Labeling

| 1. J.F. Smith | R01AR42846-02 | 3/24 - 2/25 | X X | B. 4 per mo
|            |                                             |                        |                             | C. 15 per mo |
| 2. S.R. Jones | K01AR41654-04 | 6/25 - 5/27 | X | A. 2 per mo
|            |                                             |                        |                             | D. 6 per mo  |
EXHIBIT III— Sample of Information Useful to Reviewers

Sample of information useful to reviewers in evaluating a core. This example was developed for a tissue acquisition core.

I. What types of samples are needed?
   A. Diseases
   B. Numbers of samples
   C. Source of samples
   D. Age
   E. Sex
   F. Tissues

II. What patient population is available? Is it sufficient?

III. What tissues are potentially available?
   A. Neonatal foreskins
   B. Surgical specimens of normal skin

IV. Ability to communicate needs with clinicians:
   A. Is there regular contact between the core director and clinicians? A Ph.D. core director may be less desirable because of lack of patient contact and lack of regular contact with clinicians, especially clinicians not part of the research effort.
   B. How will needs be communicated to clinicians, especially residents and clinicians not engaged in research?

V. Ability to harvest tissues and transport tissues and supplies:
   A. Who will harvest tissues? (Same clinician who sees patients in a busy clinical setting; residents; designated member of the tissue acquisition core?)
   B. Will these be biopsies required for patient care or will the biopsies be only for research purposes? Is it feasible to expect additional biopsies to be performed in a busy clinic?
   C. How will the clinicians obtain special supplies required for harvesting certain tissues (flash freezing or special fixatives for electron microscopy)? Who will either transport these supplies to the clinic or maintain a stock in the clinic?
   D. Who will transport tissues to the core? This is especially critical with frozen tissues and tissues requiring viability.

VI. Proof of previous ability to obtain similar samples:
   A. Publications and preliminary data demonstrating success at sample collection.
   B. Is it necessary to pay donors?

Justify budget and required technician effort by estimating volume of samples and slides.
